## About Us

As a manufacturer and supplier of tile spacers, Italy is our main source of inspiration. We at JP Enterprises initially produced and distributed 4 mm tile spacers in Indian marketplaces with time, we have expanded our product line. Currently, we are offering Bhumi Sigma Tile Spacer, Tile Spinner Leveling, Reusable Plastic Tile Leveler, Industrial Accurate Tile Levelling Pliers, etc. We started supplying the demand for tile spacers across the market as a promising brand. Our offerings have been a top pick for clients. Increased demand for the same prompted us to focus more on producing tile spacers of various sizes and forms. We further engaged in establishing advantageous partnerships with architects, tile stores, tile masons, and tile installers so that we can serve our client in much better manner. Our company is also active as a service provider for Customized Packaging Service.

Small, plastic spacers between tiles are typically shaped like a T or a cross. They are available in a wide variety of sizes, from 1mm to 10mm. When putting tiles on adhesive, they are utilized to maintain the gap, or space between the tiles, at a fixed size. When it is time to grout your tiles, this ensures an even finish. The founder of our company Mr. Jai Bhagwan Bargujar has registered the business with the Government of India and did so in the years that followed. Given the variety and grade of the items, he needs to speak in a forceful manner that establishes the credibility of the brand. Therefore, acquiring a quality certification was essential. He decided to pursue accreditation for his business after it satisfied a number of stringent criteria.
